AI Solutions Engineer | Enterprise AI & Backend Systems | Ankara, Turkey

Summary

AI Solutions Engineer with hands-on experience across AI agents, RAG, LLM applications, enterprise integrations, and backend systems. Experienced in applied AI, enterprise software, DevOps, and cloud infrastructure, including work at Microsoft (Tracefold local RAG), CloudSpark, and SAP Business One enterprise automation. Skilled in Python, FastAPI, Docker, Kubernetes, and business-process-oriented software development.

Technical Skills

- **Languages:** Python, TypeScript, JavaScript, SQL, Bash
- **Backend & APIs:** FastAPI, Flask, Express.js, REST APIs, JSON schemas
- **AI & Automation:** RAG, embeddings, document retrieval, local LLMs, AI agents, prompt engineering
- **Databases:** SQLite, PostgreSQL, MariaDB
- **DevOps & Infrastructure:** Linux, Docker, Docker Compose, Kubernetes, K3s, Git, CI/CD, GitOps, reverse proxy
- **Observability:** Prometheus, Grafana, syslog, log aggregation, uptime monitoring
- **Networking:** Tailscale, WireGuard, DNS, VPN, tcpdump, nmap
- **Enterprise Systems:** SAP Business One, ERPNext, CRM, inventory and approval workflows

Experience

AI Solutions Engineer

August 2026 – Present

CloudSpark Cloud Data & AI Technologies, Ümraniye, Istanbul — Hybrid

- Design and develop enterprise AI agents, RAG systems, and LLM-powered applications.
- Build backend services and APIs with Python and FastAPI, integrating AI into existing business workflows.
- Develop enterprise integrations with SAP Business One to enable AI-driven access to operational data.
- Deploy and operate containerized AI services using Docker and Kubernetes, ensuring high availability.

AI Innovator Intern

July 2026 – August 2026

Microsoft, Beşiktaş, Istanbul — Remote

- Selected for the Microsoft AI Innovators Summer Internship Program, designing applied AI solutions.
- Designed and developed Tracefold: a privacy-first, fully local RAG assistant powered by Microsoft Foundry Local.
- Engineered an end-to-end RAG pipeline with local embeddings, LLM inference, and SQLite vector storage.
- Built a controlled English–Turkish bilingual pipeline with citation validation and safe-refusal mechanisms; achieved 24/24 successful cases in the verified evaluation suite.

AI Solutions Developer Intern

May 2026 – July 2026

Logosoft Bilişim & Binsal Bilişim, Ümraniye, Istanbul — Hybrid / On-site

- Designed and developed an internal AI-assisted enterprise solution integrated with SAP Business One.
- Built Python/Flask backend services and REST APIs to automate cross-functional ERP data flows.
- Analyzed ERP workflows and integrated AI capabilities with SAP Business One Service Layer.

Education

B.Sc., Management Information Systems

September 2022 – June 2026

Istanbul Gelisim University

GPA: 3.10 / 4.00 — Honors Degree

Relevant Courses: AI & Machine Learning, Systems Analysis & Design, Database Systems, ERP, Cloud Computing

High School Diploma

September 2016 – June 2020

Özel Aksaray Vizyon Akademi Anatolian High School, Aksaray

Grade: 90.07 / 100

Selected Projects

Tracefold — Privacy-First Local Enterprise RAG Assistant <i>Microsoft Internship Project Microsoft Foundry Local, Python, SQLite, Local LLMs GitHub</i> - Engineered a fully local, privacy-first document intelligence assistant operating with offline models. - Built document parsing, semantic chunking, local embedding generation, and cosine similarity retrieval. - Implemented controlled English–Turkish bilingual pipelines with citation tracking and hallucination guards. - Evaluated retrieval quality across automated test suites, achieving 24/24 verified successful groundings.	July 2026 – August 2026
AI-Powered SAP Business One Agent Platform <i>Enterprise Project SAP Business One, Python, Flask, SQLite, AI Agents</i> - Built Flask-based Service Layer integration synchronizing 58+ SAP Business One entities to a local SQLite cache. - Implemented 53 AI assistant workflows with deterministic-first validation and approval-based SAP write operations. - Designed parallel multi-worker data fetching, tiered TTL caching, and ETag optimistic concurrency.	May 2026 – July 2026
Roadmind — AI Project Prompt Studio for Coding Agents <i>Personal Project React, TypeScript, Vite, Node.js, Express.js, Prisma, SQLite, NVIDIA NIM, Ollama</i> - Built a full-stack platform for generating, managing, and refining structured AI coding agent prompts. - Integrated local LLM inference via Ollama and accelerated cloud models via NVIDIA NIM APIs. - Implemented prompt template versioning, schema validation, and multi-model comparison workflows.	2026
AI-Supported Infrastructure Automation & Homelab <i>Graduation Project Docker, Docker Compose, Linux, Git, LLM API GitHub</i> - Containerized 12 isolated services with Docker and Docker Compose behind an Nginx reverse proxy. - Built an AI-driven monitoring pipeline analyzing server telemetry (CPU, RAM, disk, service health). - Designed controlled execution with allowlist verification, user approval gates, audit logs, and Git rollback.	February 2026 – June 2026
ERPNext Self-Hosted Deployment & Operations Infrastructure <i>Academic Project ERPNext, Docker, K3s, GitOps, Prometheus, Grafana</i> - Deployed containerized ERPNext environments on K3s covering CRM, sales, purchasing, inventory, and accounting. - Configured Prometheus and Grafana dashboards for cluster metrics, resource utilization, and uptime monitoring.	October 2025 – January 2026

Certifications

Stanford University — Artificial Intelligence Professional Certificate	July 2026
Microsoft — AI & ML Engineering Professional Certificate	March 2026
IBM — DevOps and Software Engineering Professional Certificate	June 2024
Akamai Technologies — Network Engineering Professional Certificate	May 2024
AWS — Cloud Solutions Architect Professional Certificate	October 2024

Organizations

AAAI (Association for the Advancement of Artificial Intelligence) — Member	August 2026 – Present
YZTD (Yapay Zeka ve Teknoloji Derneği) — Member	May 2026 – Present
